To keep a leading edge, you need leading-edge training. Participate in a performance-based class to get up to date information with opportunities to gain experience on new technologies and advanced diagnostic techniques.

This evening seminar is sponsored by Johnston Autostores and features ACDelco Product Specialist Robert Faulkner

*** Food served at 5:30pm.**

Course Number	Course Name	Date	Course Length
S-AC07-07.01SEM	Refrigeration Diagnostics and Service Procedures	06/07/2018	6:00 PM - 8:30 PM*

Course Description

Course Description: Designed for technicians with prior understanding of the refrigerant cycle and system operation, this seminar will provide technicians with techniques and strategies required to isolate the root cause and perform repairs of failures in R-134a and R-1234yf equipped Air Conditioning (AC) systems. The use of pressure-temperature and humidity readings as a diagnostic aide will be the foundation of the course. Specific component diagnosis includes variable displacement compressors, electrically driven compressors, expansion valves, Internal Heat Exchangers (IHX), enhanced evaporators and condensers. This course will include simulated diagnostic exercises to apply the principles learned.

EPA Section 609: Effective 1/1/2018 Certification is required to purchase refrigerant

Throughout this seminar the questions on the ASE AC certification test will be covered so at the conclusion of the class for a $19 fee* you will be able to complete the ASE test and become certified.

*ASE requires a $19 certification test fee.

$25 Seminar Fee No/Chg for PSC
