Subject: Multiport Flexible Injection Fuel System Kits

Description

ACDelco announces the introduction of two injector replacement kits for V6 and V8 (4.3L, 5.0L, 5.7L) engines. These kits replace the Central Sequential Fuel Injection System (CSFI) with a new Multiport Flexible Injection Fuel System (MFI), eliminating the poppet valve design. These state of the art injectors feature a stainless-steel director plate, which helps to reduce fuel leakage, maintain more consistent performance under hot-fuel conditions and greatly reduce the potential for plugging due to contamination. The content for each kit is provided below. These kits are available only from ACDelco.

Effective Date

Immediately

Order Input

Order via EPIC

General Information

Both kits include: Injector assembly, mounting bracket, seal kit and instruction sheet.

Kit Name	Part Number	
V-6 Injector Kit	217-3028	
V-8 Injector Kit	217-3029
